Discovering Data with NASA Scientists: Dr. Ali Omar

NASA Connections

The "A Data Visualization Experience" (ADVizE) videos series is a set of a six videos created for you to see how NASA scientists work with data.

The videos can be used to demonstrate how there are many aspects of working with data. This set of the six-series videos can help teachers and students understand how scientists think about and use data. Each video addresses a question that was given to a Subject Matter Expert.

This video addresses the following question: "*As you think about exploring the data that you have collected, what are the approaches that you use to organize your data and/or process your data before you make meaning from the data?*"
