Discovering Data with NASA Scientists: Dr. Erika Podest

NASA Connections

The "A Data Visualization Experience" (ADVizE) videos series is a set of a six videos created for you to see how NASA scientists work with data.

The videos can be used to demonstrate how there are many aspects of working with data. This set of the six-series videos can help teachers and students understand how scientists think about and use data. Each video addresses a question that was given to a Subject Matter Expert.

This video addresses the following question: "As you look at a data set(s) that has been collected, could you help us understand how you use data visualizations to shape new questions to explore further in the data set(s)?"
