Discovering Data with NASA Scientists: Marilé Colón Robles

NASA Connections

The "A Data Visualization Experience" (ADVizE) videos series is a set of a six videos created for you to see how NASA scientists work with data.

The videos can be used to demonstrate how there are many aspects of working with data. This set of the six-series videos can help teachers and students understand how scientists think about and use data. Each video addresses a question that was given to a Subject Matter Expert.

This video addresses the following question: "We know that science is very much an iterative process. Can you describe for us your process for developing your follow-up questions after you have interpreted a set of data?"
